TANSCHEREGULATIONS ON LEARNING OUTCOMES- BASED CURRICULUM FRAMEWORK GUIDELINES BASED REGULATIONS FOR UNDERGRADUATE PROGRAMME	
Programme:	B.Sc.,Zoology
Programme Code:	
Duration:	UG-3 Years
Programme Outcomes:	<p>PO1: Disciplinary knowledge: Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate Programme of study</p> <p>PO2: Communication Skills: Ability to express thoughts and ideas effectively in writing and orally; Communicate with others using appropriate media; confidently share one's views and express herself/himself; demonstrate the ability to listen carefully, read and write analytically, and present complex information in a clear and concise manner to different groups.</p> <p>PO3: Critical thinking: Capability to apply analytic thought to a body of knowledge; analyse and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; identify relevant assumptions or implications; formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development.</p> <p>PO4: Problem solving: Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge; and apply one's learning to real life situations.</p> <p>PO5: Analytical reasoning: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.</p> <p>PO6: Research-related skills: A sense of inquiry and capability for asking relevant/appropriate questions, problem arising, synthesising and articulating; Ability to recognise cause-and-effect relationships, define problems, formulate hypotheses, test hypotheses, analyse, interpret and draw conclusions from data, establish hypotheses, predict cause-and-effect relationships; ability to plan, execute and report the results of an experimenter investigation</p> <p>PO7: Cooperation/Teamwork: Ability to work effectively and respectfully with diverse teams; facilitate cooperative or coordinated effort on the part of a group, and act together as a group or a team in the interest of a common cause and work efficiently as a member of a team</p> <p>PO8: Scientific reasoning: Ability to analyse, interpret and draw conclusions from quantitative/qualitative data; and critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.</p> <p>PO9: Reflective thinking: Critical sensitivity to lived experiences, with self-awareness and reflexivity of both self and society.</p> <p>PO10 Information/digital literacy: Capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate, and use a variety of relevant information sources; and use appropriate software for analysis of data.</p> <p>PO11 Self-directed learning: Ability to work independently, identify appropriate resources required for a project, and manage a project through to completion.</p>

	<p>PO 12 Multicultural competence: Possess knowledge of the values and beliefs of multiple cultures and a global perspective; and capability to effectively engage in a multicultural society and interact respectfully with diverse groups.</p> <p>PO 13: Moral and ethical awareness/reasoning: Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Capable of demonstrating the ability to identify ethical issues related to one's work, avoid unethical behaviours such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights; appreciating environmental and sustainability issues; and adopting objective, unbiased and truthful actions in all aspects of work.</p> <p>PO14: Leadership readiness/qualities: Capability for mapping out</p>
--	--

	<p>the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination, in a smooth and efficient way.</p> <p>PO 15: Lifelong learning: Ability to acquire knowledge and skills, including „learning how to learn”, that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.</p>
--	--

Programme Specific Outcomes:	<p>PSO1 – Placement To prepare the students who will demonstrate respectful engagement with others' ideas, behaviors, beliefs and apply diverse frames of reference to decisions and actions.</p> <p>PSO 2 - Entrepreneur: To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skill that will facilitate startups and high potential organizations</p> <p>PSO3 – Research and Development: Design and implement HR systems and practices grounded in research that comply with employment laws, leading the organization towards growth and development.</p> <p>PSO4 – Contribution to Business World: To produce employable, ethical and innovative professionals to sustain in the dynamic business world.</p> <p>PSO 5 – Contribution to the Society: To contribute to the development of the society by collaborating with stakeholders for mutual benefit</p>
-------------------------------------	--

Consolidated Semester wise and Component wise Credit distribution

Parts	SemI	SemII	SemIII	SemIV	SemV	SemVI	Total Credits
PartI	3	3	3	3	-	-	12
PartII	3	3	3	3	-	-	12
PartIII	13	13	13	13	22	18	92
PartIV	4	4	3	6	4	1	22
PartV	-	-	-	-	-	2	2
Total	23	23	22	25	26	21	140

*Part I, II, and Part III components will be separately taken into account for CGPA calculation and classification for the undergraduate programme and the other components. IV, V have to be completed during the duration of the programme as per the norms, to be eligible for obtaining the UG degree.

METHODS OF EVALUATION		
Internal Evaluation	Continuous Internal Assessment Test	25 Marks
	Assignments/Snap Test/Quiz	
	Seminars	
	Attendance and Class Participation	
External Evaluation	End Semester Examination	75 Marks
Total		100 Marks
METHODS OF ASSESSMENT		
Remembering (K1)	<ul style="list-style-type: none"> The lowest level of questions require students to recall information from the course content. Knowledge questions usually require students to identify information in the textbook. 	
Understanding (K2)	<ul style="list-style-type: none"> Understanding of facts and ideas by comprehending, organizing, comparing, translating, interpolating and interpreting in their own words. The questions go beyond simple recall and require students to combine data together. 	
Application (K3)	<ul style="list-style-type: none"> Students have to solve problems by using/applying a concept learned in the classroom. Students must use their knowledge to determine an exact response. 	
Analyze (K4)	<ul style="list-style-type: none"> Analyzing the question is one that students break down something into its component parts. Analyzing requires students to identify reasons/causes or motives and reach conclusions or generalizations. 	
Evaluate (K5)	<ul style="list-style-type: none"> Evaluation requires an individual to make judgment on something. Questions to be asked to judge the value of an idea, a character, a work of art, or a solution to a problem. Students are engaged in decision-making and problem-solving. Evaluation questions do not have single right answers. 	
Create (K6)	<ul style="list-style-type: none"> The questions of this category challenge students to get engaged in creative and original thinking. Developing original ideas and problem-solving skills. 	

HighlightsoftheRevampedCurriculum:

- Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising statistical models and algorithms for providing solutions to industry/real life situations. The curriculum also facilitates peer learning with advanced statistical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- The General Studies and Statistics based problem solving skills are included as mandatory components in the ‘Training for Competitive Examinations’ course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- The Statistical Quality Control course is included to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- The Internship during the second year vacation will help the students gain valuable work experience, that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge.

dgetopracticalsituations. The state of art technologies in conducting a Explain in a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.

- State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest DBMS and Computer software for Analytics.

ValueadditionsintheRevampedCurriculum:

Semester	Newly introduced Components	Outcome/Benefits
I	FoundationCourse To ease the transition of learning from higher secondary to higher education, providing an overview of the pedagogy of learning about Statistics and simulating mathematical concepts to real world.	<ul style="list-style-type: none"> • Instil confidence among students • Create interest for the subject
I,II,III,IV	SkillEnhancementpaper s (Disciplinecentric/ Generic/Entrepreneurial)	<ul style="list-style-type: none"> • Industry ready graduates • Skilled human resource • Students are equipped with essential skills to make them employable • Training on Computing/Computational skills enable the students gain knowledge and exposure on latest computational aspects • Data analytical skills will enable students gain internships, apprenticeships, fieldwork involving data collection, compilation, analysis etc. • Entrepreneurial skill training will provide an opportunity for independent livelihood • Generates self-employment • Creates small scale entrepreneurs • Training to girls lead to women empowerment • Discipline centric skill will improve the Technical knowledge of solving real life problems using ICT tools
III,IV,V & VI	Elective papers- An open choice of topics categorized under Generic and Discipline Centric	<ul style="list-style-type: none"> • Strengthening the domain knowledge • Introducing the stakeholders to the State-of-Art techniques from the streams of multi-disciplinary, cross disciplinary and interdisciplinary nature • Students are exposed to Latest topics on Computer Science/IT, that require strong statistical background • Emerging topics in higher education/industry/communication network/health sector etc. are introduced with hands-on-training, facilitates designing of statistical models in respective sectors
IV	DBMS and Programming skill, Biostatistics,	<ul style="list-style-type: none"> • Exposure to industry moulds students into solution

	Statistical Control, Statistics, Operations Research	Quality Official	Providers <ul style="list-style-type: none"> • Generates Industry ready graduates • Employment opportunities enhanced
II year Vacation activity	Internship /Industrial Training		<ul style="list-style-type: none"> • Practical training at the Industry/ Banking Sector /Private/Public sector organizations/Educational institutions, enable the students gain professional experience and also become responsible citizens.
V Semester	Project with Viva–voce		<ul style="list-style-type: none"> • Self-learning is enhanced • Application of the concept to real situation is conceived resulting in tangible outcome
VI Semester	Introduction of Professional Competency component		<ul style="list-style-type: none"> • Curriculum design accommodates all category of learners ; ‘Statistics for Advanced Explain’ component will comprise of advanced topics in Statistics and allied fields, for those in the peer group/aspiring researchers; • ‘Training for Competitive Examinations’ – caters to the needs of the aspirants towards most sought-after services of the nation viz, UPSC, ISS, CDS, NDA, Banking Services, CAT, TNPSC group services, etc.
Extra Credits: For Advanced Learners/Honors degree			<ul style="list-style-type: none"> • To cater to the needs of peer learners/research aspirants

Skills acquired from the Courses	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill

SEMESTER – I

Course Code:	Course Name	Category	L	T	P	S	C	Inst Hours	Marks		
									Int.	Ext.	Total
23BZO1C1	INVERTEBRATA	Core	Y	-	-	-	5	5	25	75	100
Learning Objectives											
CO1	To understand the basic concepts of lower animals and observe the structure and functions.										
CO2	To illustrate and examine the systemic and functional morphology of various group of invertebrates.										
CO3	To differentiate and classify the various groups of animal modes of life and to estimate the biodiversity.										
CO4	To compare and distinguish the general and specific characteristics of reproduction in lower animals.										
CO5	To infer and integrate the parasitic and economic importance of invertebrate animals										
	Details									Course Objectives	
UNIT I	Protozoa: Introduction to Classification, taxonomy and nomenclature. General characters and classification of Phylum Protozoa up to classes. Type study - <i>Paramecium</i> - Parasitic protozoans (<i>Entamoeba</i> , <i>Trypanosoma</i> & <i>Leishmania</i>) - Economic importance Nutrition in protozoa - Host-parasitic interactions in <i>Entamoeba</i> Locomotion in protozoa Porifera: General characters and classification up to Classes. Type study Ascon Sponge (<i>Leucosolenia</i>) - Skeleton in sponges, Economic importance in Sponges Canal system in sponges - Reproduction in sponges									CO1	
UNIT II	Coelenterata : General characters and classification up to classes – Type study - <i>Obelia</i> - Mesenteries in Anthozoa - Economic importance of corals and coral reefs - Polymorphism in Coelenterates. Platyhelminthes: General characters and classification of up to classes. Type study – <i>Fasciola hepatica</i> . Parasitic adaptations. Host- parasitic interactions of Helminth parasites.									CO2	
UNIT III	Aschelminthes : General characters and classification of up to classes - Type study - <i>Ascaris lumbricoides</i> . Nematode Parasites and diseases - <i>Wuchereria bancrofti</i> , <i>Enterobius vermicularis</i> . Annelida: General characters and classification up to Classes. Type study – <i>Nereis</i> Metamerism in Annelida. Nephridium in Annelids. Coelom in Annelids „Reproduction in polychaetes.									CO3	
UNIT IV	Arthropoda: General characters and classification of Phylum Arthropoda up to Classes. Detailed study: <i>Penaeus indicus</i> . Affinities of <i>Peripatus</i> – Larval forms in Crustacea – Organization of Centipede and Millipede Insects associated with human diseases: Mosquitoes, housefly, bed bug, human head louse. Insects associated with household materials: Ants, Termites, Silver fish. Insect pests: Life cycle and types of damage to plants. Pest of rice: Rice stem borer (<i>Scirphophaga incertulas</i>) – Pest of Sugarcane: The shoot borer (<i>Chilo infuscatellus</i>) – Pest of coconut: The rhinoceros beetle (<i>Oryctes rhinoceros</i>) Principles of Integrated Pest Management.									CO4	

UNIT V	Mollusca: General characters and classification of Phylum Mollusca up to Classes. Detailed study: <i>Pila globosa</i> . Foot in Mollusca, torsion in Mollusca, Economic importance of Molluscs – Cephalopoda as the most advanced Molluscs.	CO5
	Echinodermata: General characters and classification of Phylum Echinodermata up to Classes. Detailed study: <i>Asterias</i> . Water vascular system in Echinodermata – Larval forms of Echinoderms.	

Course Outcomes

Course Outcomes	On completion of this course, students will;	
CO1	Understand the basic concepts of invertebrate animals and recall its structure and functions.	PO 1
CO2	Illustrate and examine the systemic and functional morphology of various groups of invertebrates.	PO1, PO2
CO3	Differentiate and classify the animal's mode of life in various taxa and estimate the biodiversity.	PO4, PO6
CO4	To compare and distinguish the various physiological processes and organ systems in lower animals.	PO4, PO5, PO6
CO5	Infer and integrate the parasitic and economic importance of invertebrate animals.	PO3, PO8

Methods of Evaluation

Internal Evaluation	Continuous Internal Assessment Test	25 Marks	
	Assignments		
	Seminars		
	Attendance and Class Participation		
External Evaluation	End Semester Examination		
	Total		
	100 Marks		

Methods of Assessment

Recall (K1)	Simple definitions, MCQ, Recall steps, Concept definitions
Understand/ Comprehend (K2)	MCQ, True/False, Short essays, Concept explanations, Short summary or overview
Application(K3)	Suggest idea/concept with examples, Suggest formulae, Solve problems, Observe, Explain
Analyze (K4)	Problem-solving questions, Finish a procedure in many steps, Differentiate between various ideas, Map knowledge
Evaluate (K5)	Longer essay/ Evaluation essay, Critique or justify with pros and cons
Create (K6)	Check knowledge in specific or offbeat situations, Discussion, Debating or Presentations

SEMESTER – I
CORE COURSE-II

Course Code	Course Name	Category	L	T	P	S		Inst Hours	Marks				
									CIA	Ext.	Tot.		
23BZO1P1	INVERTEBRATA LAB COURSE	Core practical		-	p	-	3	4	25	75	100		
Learning Objectives													
CO1	To identify the different groups of invertebrate animals by observing their external characteristics.												
CO2	To understand the organs, organ system and their functions in lower animals.												
CO3	To get knowledge about the different modes of life and their adaptation based on the environment.												
CO4	Able to dissect and display the internal organs and mount the mouthparts and scales of invertebrates.												
SECTION	Details									Course Objectives			
UNIT I	Major Dissection : Cockroach: Digestive system. Circulatory system, Nervous system, Earthworm: Nervous System, Digestive system <i>Pila globosa</i> : Nervous system, Digestive system									CO1			
UNIT II	Mounting: Earthworm: Body setae; Pineal setae. <i>Pilaglobosa</i> : Radula. Honey Bee, House fly ,Cockroach and Mosquito mouthparts. Prawn appendages.									CO2			
UNIT III	Spotters : (i). Protozoa: Amoeba, Paramoecium, Paramoecium Binary fission and Conjugation, Vorticella, Entamoeba histolytica, Plasmodium vivax (ii). Porifera: Sycon, Spongilla, Euspongia, Sycon - T.S & L.S, Spicules, Gemmule (iii). Coelenterata: Obelia – Colony & Medusa, Aurelia, Physalia, Velella, Corallium, Gorgia, Pennatula (iv). Platyhelminthes: Planaria, Fasciola hepatica, Fasciola larval forms- Miracidium, Redia, Cercaria, Echinococcus granulosus, Taenia solium, Schistosoma haematobium (v). Nemathelminthes: Ascaris(Male & Female), Drancunculus, Ancylostoma, Wuchereria (vi). Annelida: Nereis, Aphrodite, Chaetopteurs, Hirudinaria, Trochophore larva (vii). Arthropoda: Palaemon, Scorpion, Scolopendra, Sacculina, Limulus, Peripatus, Larvae - Nauplius, Mysis, Zoa, Mouth parts of male & female Anopheles and Culex, Mouthparts of Housefly and Butterfly. (viii). Mollusca: Chiton, Pila, Unio, Pteredo, Murex, Sepia, Loligo, Octopus, Nautilus, Glochidium larva (ix). Echinodermata: Asterias, Ophiothrix, Echinus, Clypeaster, Cucumaria, Antedon, Bipinnaria larva									CO3			
UNIT IV	Preserve any Two insect pests and prepare a report on its name,life cycle, damaging crops and management of the pests using different methods.									CO4			
UNIT V	Observation note/Record									CO5			
Course Outcomes													
Course Outcomes	On completion of this course, students will;												
CO1	Identify and label the external features of different groups of invertebrate animals.								PO1				
CO2	Illustrate and examine the circulatory system, nervous system and reproductive system of invertebrate animals.								PO1, PO2				
CO3	Differentiate and compare the structure, function and mode of life of various groups of animals.								PO4, PO6				
CO4	To compare and distinguish the dissected internal organs of lower animals.								PO4, PO5, PO6				
CO5	Prepare and develop the mounting procedure of								PO3, PO8				

economically important invertebrates.

SCHEME OF EVALUATION	
Dissect and display the digestive system of Pila/Dissect and display the digestive system and nervous system of Earthworm	15 Marks
Mounting Housefly mouth parts/Earthworm body setae and penial setae	10 Marks
Identify Sketch and comment on A,B,C,D &E	15 Marks
Preserve any two insect pest and submit a descriptive report about the pest ,infested plants ,types of damage and natural way of control	10 Marks
Bonafide Record of the , work done in laboratory	10 Marks
Total	60 Marks

Course Code	Course Name	Category	L	T	P	S		Inst Hours	Marks		
									CIA	Ext.	Tot.
23BZO1S1	Ornamental Fish Farming & Management	SEC	Y	-	-	-	2	2	25	75	100

Learning Objectives:

- To highlight the importance of ornamental fish culture in relation to entrepreneurship development.
- To enable the identification, culture and maintenance of commercially important ornamental fishes.
- To provide the knowledge on the techniques of ornamental fish breeding, rearing, disease control and economics of ornamental fish farming.

Unit I	Introduction to ornamental fish keeping. Scope and importance of ornamental fish culture. Domestic and global scenario of ornamental fish trade and export potential. Commercially important ornamental fishes - Indigenous and exotic varieties.
Unit II	Biology of egg layers and live bearers. Food and feeding in ornamental fishes. Formulated feed and Live feed; Live feed culture. Breeding, hatchery and nursery management of egg layers (eg. Goldfish) and live bearers (eg. Guppy).
Unit III	Aquarium design and construction; Accessories - aerators, filters and lighting. Aquarium plants and their propagation. Maintenance of aquarium and water quality management. Ornamental fish diseases, their prevention, control and treatment methods.
Unit IV	Conditioning, packing, transport and quarantine methods. Economics, trade regulations, domestic and export marketing strategies. Practical 1) Identification of locally available ornamental fishes - Egg layers and live bearers. 2) Identification of locally available live feed organisms.

3. <https://krishijagran.com/agripedia/income-generation-by-ornamental-fish-culture/>
4. <https://99businessideas.com/ornamental-fish-farming/>

Course Outcome:

- The students will be able to identify, culture, maintain and market the commercially important ornamental fishes.
- The knowledge and skills gained on the different aspects of ornamental fish keeping will enable the students to develop entrepreneurship potential and help in self employment.

Course Code	Course Name	Category	L	T	P	S	Inst Hours	Marks			
								CIA	Ext.	Tot.	
23BZO1FC	Foundation course for Zoology	FC	Y	-	-	-	2	2	25	75	100

Learning Objectives:

- To highlight the importance of ornamental fish culture in relation to entrepreneurship development.
- To enable the identification, culture and maintenance of commercially important ornamental fishes.
- To provide the knowledge on the techniques of ornamental fish breeding, rearing, disease control and economics of ornamental fish farming.

Unit I	Life and its manifestation , History of Biology-Evolution of Biology, Branches of zoology, Biodiversity -Outline Classification of Invertebrates and Vertebrates up to class level.
Unit II	Interaction of living organisms with environment : Types of Ecosystem-Pond, Terrestrial, Forest and Land, Components of Ecosystem-Abiotic and Biotic factors, Food web, Food chain, Environment issues Conservation and Management strategies-Zoological Parks and Sanctuaries.
Unit III	Cytology and Genome biology : Prokaryotic cells-Eukaryotic cells-Importance of cell organelles-Cancer cells-Immune cells-Stem cells- Principle resolving power & use of compound microscope, confocal microscope and electron microscope-Characteristics features-Mendel's Principles-DNA-RNA modern concept of gene-central dogma of molecular biology.
Unit IV	Embryology and Development of Biology : Gametes (Sex cells)-Egg-Sperm-Fertilization-Cleavage-Developmental stages-Zygote-Cleavage-Morula-Blastula and Gastrula-Origin of life, Spontaneous generation theory of life-Origin of cells-Oparin coacervate theory.
Unit V	Biochemistry and Physiology : Introduction to role of essential biological Compounds –Proteins, Carbohydrates, Lipids, Water and Vitamins. Scope of Zoology -General introduction and Application of Apiculture, Aquaculture, Sericulture, Lac culture, Vermiculture, Poultry Keeping, Dairy farming-Zoological survey of India, Central Marine Fisheries Research Institute.

Course Code	Course Name	Category	L	T	P	S	Inst Hours	Marks			
								CIA	Ext.	Tot.	
23BZO2S2	ANIMAL BEHAVIOUR	DSC-I	Y	-	-	-	2	2	25	75	100

Learning Objectives

1. To learn the origin and development of animal behaviour and to understand the influence of genetics, environment on animal behaviours.
2. To understand the biological properties of animal behavior, with an evolutionary and ecological emphasis.
3. To compare innate and learned behavior and differentiate between various mating systems.
4. To impart the knowledge about visual and auditory communication; courtship, mate choice, and mating systems; social behavior and social systems; and animal personality.
5. To discuss how movement and migration behaviors are a result of natural selection.

UNIT I	Genetics and Behaviour : Genetic material, Genes and chromosomes, Genetic variation, Single and Polygenic inheritance of behaviour, Heritability of behaviour, Natural Selection and behaviour, Frequency distribution of phenotypes, Darwinian fitness, Evolution of adaptive strategies.
UNIT II	Evolution and Social Behaviour : Sexual selection, Altruism, Sexual strategy and social organisation, Animal perception, Neural control of behaviour, Sensory processes and perception, Visual adaptations to unfavourable environments.
UNIT III	Animal and the Environment : Coordination and Orientation, Homeostasis and Behaviour, Physiology and Behaviour in changing environments, Animal Learning, Conditioning and Learning, Biological aspects of learning, Cognitive aspects of learning.
UNIT IV	Understanding Complex Behaviour : Instinct and learning, Displacement activities, Ritualization and Communication, Decision making behaviour in Animals, Complex behaviour of honey bees, Evolutionary optimality, Mechanism of Decision making. The mentality of Animals : Languages and mental representation, non-verbal communication in human, mental images, Intelligence, tool use and culture, Animal awareness and Emotion.
UNIT V	Chronobiology : Organization of circadian system in multicellular animals; Concept of central and peripheral clock system; Circadian pacemakers system in vertebrates with particular reference to Drosophila; Photoreception and photo-transduction; The physiological clock and measurement of day length; Molecular bases of seasonality; The relevance of biological clocks for human welfare - Clock function (dysfunction); Human health and diseases - Chronopharmacology, chronomedicine, chronotherapy.22

Text Books

1. David McFarland, 1985. Animal Behaviour, Longman Scientific & Technical, UK. 576 pp.
2. Harjindra Singh, 1990. A Text Book of Animal Behaviour, Anmol Publication, 293 pp.
3. Hoshang S. Gundevia and Hare Goving Singh, 1996. Animal Behaviour, S. Chand & Co, 280 pp.
4. Shukla, J. P. 2010. Fundamentals of Animal Behaviour, Atlantic, 587 pp.
5. Vinod Kumar, 2002. Biological Rhythms. Narosa Publishing House, Delhi.

Suggested Readings

1. Michael D. Breed and Janice Moore, 2012. Animal Behaviour, Academic Press, USA, 359 pp.
2. Aubrey Manning and Martin Stamp Dawkins, 2012. An Introduction to Animal Behaviour, 6th Edition, Cambridge University Press, UK. 458 pp.
3. Davis E. Davis, 1970. Integral Animal Behaviour, MacMillan Company, London, 118 pp.
4. Jay, C. Dunlap, Jennifer, J. Loros, Patricia J. DeCoursey (ed). 2004. Chronobiology Biological Time Keeping, Sinauer Associates Inc, Publishers, Sunderland, MA.

2. <https://bit.ly/3i6wUxR>
3. <https://www.behaviour.univie.ac.at/>
4. <https://www.ru.nl/bsti/>

CourseOutcomes(COs)

1. Recall and record genetic basis and evolutionary history of behaviour.
2. Classify movement and migration behaviors and explain environmental influence upon behaviour.
3. Analyze and identify innate, learned and cognitive behavior and differentiate between various mating systems.
4. Assess complexity involved in behavioural traits and evaluate hormones and their role in aggression and reproduction.
5. Discuss the rhythmicity of behaviour expressions and the scientific concepts in behavior and behavior ecology.23

SEMESTER III

Course Outcomes	On completion of this course, students will;	
CO1	To understand and recall the basic structure, origin and development of cell organelles.	PO1
CO2	To integrate and assess the biochemical, cytological and histological tools to infer cellular basis of organization.	PO1, PO2, PO3
CO3	To analyze and differentiate organisms based on structure, composition and inter and intracellular interactions.	PO3, PO4, PO5
CO4	To explain the role of cells and cell organelles in various biological processes.	PO2, PO3, PO5, PO6, PO8
CO5	To construct and simulate the role of different cytological tools to explain the structure and complexity of cells and cell organelles.	PO3, PO4, PO5, PO6, PO7, PO8

SEMESTER-III

Course Outcomes	On completion of this course, students will;	
CO1	To describe, examine and interpret the organization of genomic material and to research theories of genetic inheritance.	PO1
CO2	To prepare samples of genetic molecules and to determine their purity, structure and characteristics.	PO1, PO2
CO3	To experiment with genomic preparations and devise Techniques to distinguish genetic material in different organisms to survey biodiversity.	PO4, PO6
CO4	To assess the changes in genetic material and to predict and consider the consequences of those changes.	PO4, PO5, PO6
CO5	To report and justify the results of molecular and genetic experiments in an accurate and meaningful manner.	PO3, PO8

								CIA	Ext.	Tot.	
23BZO3S1	BIOCOMPOSTING FOR ENTREPRENEURSHIP	SEC-III	Y	-	-	-	2	2	25	75	100

Learning Objectives:

- To highlight the importance of Biocomposting for entrepreneurship in waste management.
- To enable students for setting up Biocompost units and bins for waste reduction.

UNIT I	Biocomposting—Definition, types and ecological importance.
UNIT II	Types of Biocomposting technology—Field pits/ground heaps/tank/large-scale/batch and continuous methods.
UNIT III	Preparation of Biocompost pit and bed using different amendments.
UNIT IV	Applications of Biocompost in soil fertility maintenance, promotion of plant growth, value added products, waste reduction, etc.
UNIT V	Economics of establishment of a small biocompost unit— project report proposal for Self Help Group (Income and employment generation).

Practical

- Preparation procedures for Biocompost pit.
- Selection of Biocompost material, separation of Compostable and Non-compostable materials.
- Packing and marketing of Biocompost.
- Field visit to Biocomposting unit.

 VanderWerff, A.W.G., Fuchs, J.G., Raviv, M., Termorshuizen, A.J. (Editors) 2016. Handbook for Composting and Compost Use in Organic Horticulture. BioGreenhouse COSTActionFA1105, www.biogreenhouse.org.

Course outcomes:

- The students will gain knowledge about the process of Biocomposting.
- Students will be able to demonstrate Biocomposting techniques for various end applications like solid waste management, industrial waste recycling using sugarcane bagasse, etc.
- To gain knowledge about the economic cost of establishing small Biocompost units as a cottage industry.

Course Code	Course Name	Category	L	T	P	S	Inst Hours	Marks			
								CIA	Ext.	Tot.	
23BZO3S2	NANOBIOLOGY	DSC-II	Y	-	-	-	2	2	25	75	100

Learning Objectives:

This course provides knowledge about the basic concepts of nanobiology. The learners will be able to acquire skills in the assembly, design and types of nanomaterials and nanoparticles. They will be able to appreciate the applications of nanobiology in diverse fields.

UNIT I	Nanobiology-Definition-concepts and scope. History of nanotechnology and nanoscience in Nature; Structure and Properties of nanomaterials: size, surface charge, conductivity, optical properties and biocompatibility.
UNIT II	Synthesis and characterization of nanomaterials, Fabrication of nanostructures, Metallic nano particles, semiconductor, biopolymers, nano-structures and nanoparticles.
UNIT III	Composition and functional properties of nanostructures: Protein and peptide-based nanostructures, carbohydrate and nucleic acid based nanomaterials; Use of gold, silver and other metallic nanoparticles.
UNIT IV	Strategies to design biologically active nanostructure-based biomaterials. Interaction of nanoparticles with biomolecules to study their conformational and functional properties.
UNIT V	Biological Applications of Nanomaterials and nanoparticles – therapeutics – biomaterials - Immobilized enzymes - drug delivery systems – Biosensors - Cellular imaging tools and diagnostics.

- Phoenix, D.A. and Ahmad, W (2014) *Nanobiotechnology*. One Central Press Ltd.

Course outcomes (Cos)

Students will be able to:

- Understand basics of Nano-science and Nano-biology.
- Gain knowledge on nanomaterials and nanoparticles.
- Know the biological applications of nanomaterials and nanoparticles.
- Apply their knowledge in their career development in higher education, research and development.

SEMESTER-IV

Course Code	CourseName	Category	L	T	P	S	Inst .Hours	Marks		
								CI	Exte	Total
23BZO4C1	Developmental Biology	Core	Y	-	-	-	4	4	25	75
Learning Objectives										
CO1	To create an awareness to the students about the theories, concepts and basics of Developmental Biology.									
CO2	To provide students about the idea of sex cells, fertilization, cleavage, differentiation and development of organs.									
CO3	To make an awareness of the induction, organizers and development of extra embryonic structures.									
CO4	To provide adequate explanation to students about the late embryonic developments and postembryonic development and aging									
CO5	To give an idea about teratogenesis, invitro fertilization, stem cells and amniocentesis to the students									
	Details							No.of Hours	Course Objectives	
UNIT I	Gametogenesis & Fertilization Basic concepts of developmental biology. Structure & types of Spermatozoa, Mammalian egg-Egg membranes. - types of egg - Spermatogenesis - Oogenesis. Fertilization-mechanism, theories and significance- Parthenogenesis.							12	CO1	
UNIT II	Blastulation & Gastrulation Cleavage-Planes and Patterns, Factors controlling cleavage - Fate map and its construction. Blastulation - types of blastula. Morphogenetic movements-Gastrulation offrog & chick.							12	CO2	
UNIT III	Organogenesis Development of Brain, Eye and Heart in frog. Development of Nervous system in chick. Foetal membranes in chick.. Development of Pro, Mesom etanephric kidneys. Placentation in Mammals.							12	CO3	
UNIT IV	Applied Embryology Organizer concept-Structure-mechanism of induction and competence. Nuclear transplantation-teratogenesis -Regeneration: types-events and factors. Embryonic stem cells & significance. Methods to culture embryo							12	CO4	
UNIT V	Human Embryology Reproductive organs, Menstrual cycle and menopause - Pregnancy-trimesters-development. Erythroblastosis foetalis - Twins - types. Infertility - causes- Test tube baby and Assisted Reproductive Technology- Embryotransfer - Amniocentesis.							12	CO5	

MappingwithProgrammeOutcomes:

Course Outcomes		
CO1	To describe and illustrate the significance of cellular processes in embryonic development.	PO1
CO2	To relate the factors that contribute to the developmental process, construct fate maps and illustrate the steps in morphogenesis and organogenesis.	PO1, PO2
CO3	To correlate the involvement of specific cell types in the formation of specific organs and explain the importance of morphogens.	PO4, PO6
	To distinguish between the different types of developmental mechanisms involved in the formation of specific organs.	

CO4	nvariousorganismsandappraisethespecies-basedifferencesindevelopment.	PO4,PO5,PO6
CO5	Tojustifyandvalidatetheroleofenvironmentandgeneticsinfluencingembryonicdevelopment	PO3,PO8

23BZO4S1	HUMAN REPRODUCTIVE BIOLOGY	DSC-III	Y	-	-	-	2	2	25	75	100

Learning Objectives:

- To enable students to understand the endocrine structures and hormones associated with the physiology of reproductive system
 - To enable students to learn about the male reproductive system and accessory glands and regulation
- To enable students to learn about the female reproductive system and regulation of its function
- To enable students to comprehend about fertilization, pregnancy, parturition and lactation
- To equip students with knowledge on causes of infertility, reproductive health, assisted reproductive technology and associated ethical issues

UNIT I	Gonadal hormones and mechanism of hormone action, steroids, glycoproteins in hormones, and prostaglandins, hypothalamo-hypophyseal-gonadal axis, regulation of gonadotrophin secretion in male and female; Reproductive System: Development and differentiation of gonads, genital ducts, external genitalia, mechanism of sex differentiation; Puberty
UNIT II	Outline and histoarchitecture of male reproductive system; Testis: Cellular functions; Spermatogenesis and its hormonal regulation; Androgen synthesis and metabolism; Epididymal function and sperm maturation; Accessory glands functions; Sperm transportation in male tract; Andropause
UNIT III	Outline and histoarchitecture of female reproductive system; Ovary: oogenesis and its hormonal regulation; Steroidogenesis and secretion of ovarian hormones; Reproductive cycles and their regulation, changes in the female tract; Menopause
UNIT IV	Ovum transport in the fallopian tubes; Sperm transport in the female tract, Fertilization; Hormonal control of implantation; Hormonal regulation of gestation, pregnancy diagnosis, foeto-maternal relationship; Mechanism of parturition and its hormonal regulation; Lactation and its regulation
UNIT V	Infertility in male and female: causes, diagnosis and management; Sexually transmitted infections; Modern contraceptive technologies; Assisted Reproductive Technology: sex selection, sperm banks, frozen embryos, Stem Cell banks, <i>in vitro</i> fertilization, ET, EFT, IUT, ZIFT, GIFT, ICSI, PROST; ethical issues related to ART; Surrogate motherhood; ethical issues; Consanguinity; Fetal Loss and Birth Defects; Adoption

COURSE OUTCOMES

On successful completion of the course, students will be able to

- Recall the structure and functioning of the male and female reproductive system, associated endocrinology, causes for infertility and assisted reproductive technology
- Describe the structure and physiology functions of male and female reproductive systems.
- Explain the role of structures, accessory glands and hormones associated with the reproductive tracts and their control
- Explain the mechanism of sex determination.
- Discuss age-associated physiological changes in the reproductive tract
- Describe physiological changes during pregnancy and benefit of breastfeeding.
- Identify causes for infertility, treatments available and ethical issues related to treatments.
- Discuss advantages and disadvantages of available contraceptives.
- Analyze the different techniques and associated ethical issues related to reproductive technology

									CIA	Ext.	Tot.
23BZO4S2	WILD LIFE CONSERVATION AND MANAGEMENT	DSC-IV	Y	-	-	-	2	2	25	75	100

Learning Objectives

1. To understand and discuss the importance of wildlife, its values, modern concepts in wildlifemanagement, and relevant conservation policies.
2. To assess and instil strong foundations on wildlife policies and be familiar with a variety of laws and regulations.
3. To analyse and design appropriate approaches to turn conflict into tolerance and coexistence, with an emphasis on the human dimensions of human-wildlife interactions.
4. To evaluate and integrate all the related areas like Fundamentals in Ecology, Forestry, Natural Resource Conservation approaches and develop the role PVA models for protection of Endangered species.
5. To explain the advanced scientific basis for wildlife management and discuss National and International Efforts for successful wildlife conservation.

UNIT I	Biodiversity Extinction and Conservation Approaches: Perspectives and Expressions. Identification and prioritization of Ecologically sensitive area (ESA). Coarse filter and fine filter approaches. Regional and National approaches for biodiversity conservation.
UNIT II	Theory and Analysis of Conservation of Populations: Stochastic perturbations-Environmental, Demographic, spatial and genetics to stochasticity. Population viability analysis-conceptual foundation, uses of PVA models. Management Decisions for small populations using PVA models. Minimum viable populations & recovery strategies for threatened species.
UNIT III	National and International Efforts for Conservation: International agreements for conserving marine life, Convention on wetlands of International Importance (Ramsar convention), Conservation of Natural Resources. Overview of conservation of Forest & Grassland resources. CITES, IUCN, CBD National Forest Policy, 1988, National Wildlife Action Plan 2017-2031, Wildlife Protection Act 1972, National and State Biodiversity Action Plans and other Forests and Environmental Acts.
UNIT IV	Wildlife in India : Wildlife wealth of India & threatened wildlife, Reasons for wildlife depletion in India, Wildlife conservation approaches and limitations. Wild life Habitat: Characteristic, Fauna and Adaptation with special reference to Tropical forest. Protected Area concept: National Parks, Sanctuaries and Biosphere Reserves, cores and buffers, Nodes and corridors. Community Reserve and conservation Reserves.
UNIT V	Management of Wildlife: Distribution, status. Habitat utilization pattern, threats to survival of Slender Loris, Musk deer, Great Indian Bustard, Olive Ridley turtle. Wild life Trade & legislation, Assessment, documentation, Prevention of trade, Wild life laws and ethics.

SEMESTER-V

CourseCode	CourseName	Category	L	T	P	S		Inst.Ho urs	Marks					
									CIA	Exte rnal	Total			
23BZO5C1	EVOLUTIONARY BIOLOGY	Core	Y	-	-	-	4	5	25	75	100			
Learning Objectives														
CO1	Evolutionary biology is a branch of the biological sciences concerned with the origin of life and the diversification and adaptation of life forms over time.													
CO2	This course helps to understand the important processes, principles, and concepts of evolution.													
CO3	To provide adequate information on the Lamarckism–NeoLamarckism–Darwinism, Neutral Theory of Molecular Evolution, and Human Genome Project.													
CO4	To explain the importance of the fossil records in evolutionary studies, and the role of phylogenetic studies in the wider context of biodiversity and conservation.													
CO5	In this course, we will apply the knowledge of human evolutionary history to simulate how genetic variation within and among human populations affects risk, diagnosis, and treatment of modern diseases.													
UNIT	Details							No.ofHo urs	Course Objectives					
UNIT I	Inorganic and organic evolution-History of evolutionary thought, Primordial earth and primeval atmosphere, Chemical origin of life: Synthesis of organic molecules, Urey-Miller experiment, Origin of prokaryotes and eukaryotes.							12	CO1					
UNIT II	Lamarckism–NeoLamarckism–Darwinism–NeoDarwinism and modern synthetic theory– DeVries’ Mutation theory–modern concept of mutation–Mutation and their role in evolution–Animal Colouration and Mimicry.							12	CO2					
UNIT III	Isolating mechanisms–Modes of speciation– Hybridization as an evolutionary catalyst–Law of Adaptive Radiation– Adaptive radiation in reptiles and mammals–Convergence and parallelism–Evolutionary constancy.							12	CO3					
UNIT IV	Morphological, physiological and biochemical, embryological, Taxonomical and geographic evidences–Palaeontological evidences–evolutionary genomics. Types of rocks–Geological timescale– Nature of fossils–Dating of fossils–Fossil records of man and fossil records of horse.							12	CO4					
UNIT V	Natural selection in action in man–level of selection–Eugenics, Euphenics and Euthenics–Adaptation–Human Genome Project–Evolution and ethics.							12	CO5					
	Total							60						
Course Outcomes														
CourseOutcomes	On completion of this course, students will;													
CO1	To understand the Primordial earth and theories on origin of life								PO1					
CO2	To integrate and assess Lamarckism–NeoLamarckism–Darwinism								PO1,PO2					
CO3	To analyse various fossil records of man and fossil records of horse, various types of rocks–Geological timescale.								PO4,PO6					
CO4	To explain the Nature of fossils–Dating of fossils, evidences of evolution, Adaptive radiation								PO4,PO5,PO6					

	in reptiles and mammals,	
CO5	To construct and compile the role of Human GenomeProject,Evolutioninthediagnosis, and treatmentof diseases.	PO3,PO8

23BZO5C3	ENVIRONMENTAL BIOLOGY	Core	Y	-	-	-	4	5	25	75	100
Learning Objectives											
CO1	To understand the structure and functions of the ecosystem.										
CO2	To explain the relationship between biotic and abiotic factors in an ecosystem.										
CO3	To know the causes and effects of climate change and habitat loss.										
CO4	To bring awareness about the impact of socio-economic development on the environment and the solutions put forward by the government to reduce environmental damage.										
	Details								No.of Hours	Course Objectives	
UNIT I	Ecosystem: Concept of an ecosystem- Structure and function of an ecosystem- Producers, consumers and decomposers- Energy flow in the ecosystem- Ecological succession- Food chains, food webs and ecological pyramids- Introduction, types, characteristic features, structure and function of the following ecosystem: Forest ecosystem- Grassland ecosystem- Desert ecosystem- Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).								1 2	CO1	
UNIT II	Population And Biological Cycles: Structure and distribution - Growth curves- Groups, natality, Mortality- Density indices, Life study tables- factors affecting population growth- Carrying capacity. Population regulation and human population control. Complete and incomplete biogeochemical cycles- Sedimentary cycle.								12	CO2	
UNIT III	Environmental Stresses And Management: Global climatic pattern, global warming, atmospheric ozone, acid and nitrogen deposition. Uptake, biotransformation, elimination and accumulation of toxicants. Factors influencing bioaccumulation from food and trophic transfer. Pesticides and other chemicals in agriculture, industry and hygiene and their disposal. Bioindicator and biomarkers of environmental health. Biodegradation and bioremediation of chemicals.								12	CO3	
UNIT IV	Environmental Pollution: Definition- cause, effects and control measures of:- Air pollution- Water pollution- Soil pollution- Marine pollution- Noise pollution- Thermal pollution- Nuclear hazards.								12	CO4	

UNIT V	Biodiversity Conservation: Biodiversity crisis –habitat degradation, poaching of wildlife.-Socio economic and political causes of loss of biodiversity.-Insituandexsituconservationofbiodiversity-HotspotsofBiodiversity.Greenpeacemovement-Chipko Movement-Roleofgovernmentagencies:CentralandState Pollution Control Boards - Ministry of Environment and Forests-National Biodiversity Authority. Awareness, Programme, NGOs, Natural Disaster Management, Legislations for environmental Protection, Biovillages—sustainable utilization and development, Environmental ethics.	12	CO5

23BZO5E1	FOOD, NUTRITION AND HEALTH	DSE-I	Y	-	-	-	4	5	25	75	100

Learning Objectives

The course covers the basic concepts of balanced diet for people of different ages besides focusing on the consequences of malnutrition and the deficiency diseases and the diseases caused due to poor hygiene.

Unit I	Nutrition and dietary nutrients: Basic concepts of Food: Components and nutrients. Concept of balanced diet, nutrient requirements and dietary pattern for different groups viz., adults, pregnant and nursing mothers, infants, schoolchildren, adolescents and elderly people.
Unit II	Macronutrients and micronutrients: Macronutrients. Carbohydrates, Lipids, Proteins - Definition, Classification, their dietary source and role. Micronutrients. Vitamins - Water-soluble and Fat-soluble vitamins - their sources and importance. Important minerals viz., Iron, Calcium, Phosphorus, Iodine, Selenium and Zinc: their biological functions.
Unit III	Malnutrition and nutrient deficiency diseases: Definition and concept of health: Common nutritional deficiency diseases - Protein Malnutrition (e.g., Kwashiorkor and Marasmus), Vitamin A deficiency, Iron deficiency and Iodine deficiency disorders - their symptoms, treatment, prevention and government initiatives.
Unit IV	Life style dependent diseases - hypertension, diabetes mellitus, and obesity their causes and prevention. Social health problems - smoking, alcoholism, narcotics. Acquired Immuno Deficiency Syndrome (AIDS): causes, treatment and prevention.
Unit V	Diseases caused by microorganisms: Food hygiene: Potable water - sources and methods of purification at domestic level. Food and Water-borne infections: Bacterial diseases: cholera, typhoid fever - viral diseases: Hepatitis, Poliomyelitis - Protozoan diseases: amoebiasis, giardiasis - Parasitic diseases: taeniasis and ascariasis their transmission, causative agent, sources of infection, symptoms and prevention. Causes of food spoilage and its prevention.

Course outcomes:	
Students will be able to:	
<ul style="list-style-type: none"> ➤ Understand the role of food and nutrients in health and disease. ➤ Gain knowledge about hygiene, food safety, disease transmission. ➤ Perform food system management and leadership functions that consider sustainability in business, healthcare, community and institutional areas. 	

SEMESTER-V

CourseCode	CourseName	Category	L	T	P	S	Inst .Hours	Marks			
								CIA	External	Total	
23BZO5P1	ECO-PHYSIOLOGY PRACTICAL	Core		-	P	-	2	4	25	75	100
Learning Objectives											
CO1	To demonstrate an understanding of core ecological principles, and define scientific principles and concepts as related to environmental studies and sustainability.										
CO2	To understand the physiological processes that regulate body functions.										
CO3	To strive to demonstrate the role of experimentation in developing our understanding of living animals.										
CO4	To attain knowledge of important biomolecules such as carbohydrates, lipids, amino acids, proteins and enzymes.										
CO5	Measure and interpret experimental data and demonstrate laboratory skills in animal physiology and ecology.										
UNIT	Details							No.of Hours	Course Objectives		
UNIT I	Estimation of Abiotic Factors: Estimation of dissolved Oxygen, Dissolved carbon-dioxide, Determination of alkalinity in water samples, Determination of salinity of water samples, Determination of bicarbonate and carbonates.							12	CO1		
UNIT II	Digestive Enzymes: Survey of digestive enzymes in Cockroach, counting of cockroach haemocytes using haemocytometer. Ptyalin activity in relation to temperature and pH in human saliva. Ecological Methods: Estimation of oxygen consumption in an aquatic and a terrestrial animal.							12	CO2		
UNIT III	Biochemical Tests: Use of pH meter for estimation of pH in water and soil samples, Study of micro arthropods of water and soil samples (Tullgren's funnel method and LaDell's Floating Method). Collection, isolation, identification and mounting of marine and freshwater plankton. Study of sandy shore fauna - Study of rocky shore fauna - Study of animal Association.							12	CO3		
UNIT IV	Qualitative Detection of Biomolecules: Qualitative tests for identification of carbohydrates, proteins and lipids. Amino acid in haemolymph of any insect by chromatographic technique. Estimation of Haemoglobin by Cyanmethemoglobin method, Blood grouping - total and differential counts. Determination of plasma hemoglobin, Total erythrocyte count by hemocytometer.							12	CO4		

UNIT V	FieldWork: Visit to a local area to document environmental assets river/forest/grassland/hill/mountain. Visit to a local polluted site- Urban/Rural/Industrial/Agricultural. Study of common plants, insects, birds. Study of simple ecosystems- pond, river, hillslopes, etc.	12	CO5
	Total		60

CourseOutcomes

CourseOutcomes	On completion of this course, students will;	
CO1	List and recall the basic equipment used in physiology and cological lab and develops skill about quantitative determination of bio molecules and quantitative analysis of blood.	PO1
CO2	Demonstrate the instruments, discuss the clinical importance and its applications, and explain the Principle of bioinstruments.	PO1,PO2
CO3	Understand and identify the chemical composition of major and minor nutrients and analyse Physio-Chemical parameters that regulate metabolism.	PO4,PO6
CO4	Evaluate and Examine the various parameters of haematology and biochemistry and Identify the Nitrogenous waste products of animals.	PO4,PO5,PO6
CO5	Summarise the effect of various physical and chemical factors on enzyme activity/. Compile the changes in various physiological parameters in man and other animals using various tools and techniques.	PO3,PO8

23BZO5P2	EVOLUTION AND ENVIRONMENTAL TOXICOLOGY PRACTICAL	Core	-	-	P	-	2	4	25	75	100
Learning Objectives											
CO1	To explain the main mechanisms of environmental toxicants in causing a toxic response in living organisms.										
CO2	To describe the optimal use of nature, in the form of plants, animals, bacteria, fungi and algae, to produce renewable energy, food and nutrients in a synergistic integrated cycle of profit-making processes										
CO3	To provide practical knowledge and hands-on tools and techniques for dose-response assessment of hazardous substances.										
CO4	The use of biological systems for remediation of contaminated environments (land, air, water), and for environment-friendly processes.										
CO5	To develop data that can ensure appropriate protection of public health from the adverse effects of exposure to environmental agents.										
UNIT	Details							No.of Hours	CourseObj jectives		
UNIT I	Evolution: Fossiles: Trilobite, Nautilus, Living fossile limulus and Peripatus Animals of Evolutionary importances- Archaeopterux, Darwin's Finches Mimicry-Leaf insects, Stick insects Monarch and viceroy butterfly Adaptive Colouration Chameleon and Lycodon							12	CO1		
UNIT II	Estimation Methods: Estimation of Ammonia, Nitrites, Iron, soil alkalinity, Determination of hardness of water. Estimation of chlorine water. Environmental Determinants: Estimation of BOD/Estimation of COD. Toxicity Testing: Methodology of toxicity testing— acute and chronic tests (demonstration), Use of LC50 values—sublethal effects of critical pollutants on fish.							12	CO2		
UNIT III	Preparation of nutrient agar medium. Settling rate of bacteria from air. Bacterial Gram staining. Identification of bacteria from air up to colony characteristics. Enumeration of bacteria from air. Study of collection, concentration and preservation techniques of algae. Identification techniques of algae (Study of morphological characteristics of algae). Identification and significance of major algae with regard to pollution. Calculation of Nygaard's Indices. Calculation of species diversity-Margalef diversity index, Calculation of Kofte's species deficit index.							12	CO3		
	Estimation of Standard Plate Count (SPC) from water. Estimation of MPN of coliforms from water.										

UNIT IV	Determination of phosphate levels in clean and polluted waters. Determination of pH of soil. Determination of organic matter in soil. Determination of percent composition of soluble and insoluble components of community solid waste. Determination of percent composition of various components of community solid waste. Study of treatment efficiency of water-hyacinth in removal of TDS and changes in pH.	12	CO4
UNIT V	Mini Project and Spotters: Bio gas production - Food toxicity tests - Field visit, Reflux condenser, BOD incubator, Spectrophotometer, Colorimeter, Atomic absorption spectroscopy, Ultracentrifuge, Incubator, HPLC. Visit to wastewater and drinking water treatment plants. Study of a vermicompost plant. Biogas production - Food toxicity tests - Field visit, Reflux condenser, BOD incubator, Spectrophotometer, Colorimeter, Atomic absorption spectroscopy, Ultracentrifuge, Incubator, HPLC. Visit to wastewater and drinking water treatment plants. Study of a vermicompost plant.	12	CO5
Total		60	

CourseOutcomes

CourseOutcomes	On completion of this course, students will;	
CO1	Understand the properties of toxicants, effects, origin and occurrence in the environment and explain the principle and procedure of risk quality evaluation, monitoring and remediation of contaminated environments.	PO1
CO2	Estimate the toxic chemicals in the environment. Apply tools and techniques for experimenting with environmental problems. Identify and implement solutions to the problems.	PO1,PO2
CO3	Analyse the consistent and inconsistent range of elements. Interpret the role of the elements in Environmental pollution and the effects on organisms.	PO4,PO6
CO4	Relate the metabolic activity, diseases, ill health and death with reference to exposure to chemicals. Select the suitable experimental design to assess the toxic effects of pesticides and pollutants.	PO4,PO5,PO6
CO5	Discuss the applicability of chemical analysis and toxicity data, both individually and together, in risk assessment and environmental monitoring.	PO3,PO8

UNIT I	Introduction to microbiology History, scope, branches of microbiology. Contribution of Leeuwanhoek, Jenner, Pasteur, Koch, Systematic position: 5 kingdom classification of Whittaker and 3 kingdom classification of Carl Woese. Comparison of Bacteria, Archaea, Eukarya (tabular and diagrammatic). Controlling microbes.							12	CO1		
UNIT II	Introductory Mycology, Bacteriology and Virology General characteristics and outline classification of fungi, Morphology of some common fungi Rhizopus, Aspergillus, Penicillium- Yeasts: General characteristics and outline classification of yeasts. General characteristics of Lichens and Mycorrhiza. Classification of bacteria. General characteristics of Cyanobacteria : General characteristics, Magnetosomes, Enrichment and isolation of Magnetotactic bacteria. Types of staining Virus: General characteristics, Structure and Classification. DNA viruses: Herpesviruses and Poxviruses. RNA viruses Paramyxoviruses, Rhabdoviruses.							12	CO2		
UNIT III	Immune Cells and Organs: Overview of Immune System - General concepts and Haematopoiesis. Cells of the immune system - Immune Cells. Organs of the Immune system: Primary lymphoid organs - Secondary Lymphoid organs- Innate and Adaptive Immunity: Innate and Adaptive Immunity; (Cell mediated and humoral). Major Histo compatibility Complex (MHC): HLA antigens.							12	CO3		
UNIT IV	Antibodies: Structure, function and properties of the Immunoglobulins, Different classes of Immunoglobulins; antigenic determinants on antibodies (isotype, allotype and idiotype). Hybridoma technology- production of monoclonal antibodies and catalytic antibodies (abzymes). Hypersensitivity: classification and brief description of various types of hypersensitivities. Autoimmunity: cause of auto immune diseases- classification of auto immune diseases.							12	CO4		
UNIT V	Transplantation immunology: Types of grafts, immunological basis of graft rejection, immunosuppressive therapy and clinical transplantation. Clinical Immunology: Immunity and tumors-tumor antigens (TSTA and TAA), immune response to tumors. Tumor evasion of the immune system, Immunotherapy for tumors. Immunity against-							12	CO5		

	viral,bacterialandparasiticinfections.Vaccines:Types and uses- Immunization schedule for children.		
	Total		
CourseOutcomes			
CourseOutcomes	On completion of this course, students will;		
CO1	Tounderstand history, relevance of microbiology and classification of bacteria	PO1	
CO2	Tounderstand the working of various microscopes and their application	PO1,PO2	
CO3	Togain knowledge of various (physical and chemical) methods of control of microorganisms and safety measures to be followed while handling microbes	PO4,PO6	
CO4	Tounderstand the structure of bacterial cells, its organelles, physiology and behaviour.	PO4,PO5,PO6	
CO5	To learn different methods of staining bacteria and demonstrate proficiency in handling aseptic bacteriological specimens.	PO3,PO8

23BZO6E1	AGRICULTURAL ENTOMOLOGY	DSE-II	Y	-	-	-	4	6	25	75	100

Learning Objectives

1. Explain the basic concepts of entomology and observe the pest status of agriculture.
 2. Illustrate and examine the systemic and functional morphology of various groups of agricultural insect pests.
 3. Differentiate and classify the various groups of insect animals and estimate biodiversity.
 4. To compare and distinguish the general and specific characteristics of integrated pest management.
 5. Infer and integrate the economic importance of insects species.

UNIT I	Outline classification of insects - Causes for insect assuming pest status - Methods of collection, mounting and preservation of insect pests.
UNIT II	Insect vectors of plant diseases, Insect pests of stored grains their preventive and curative methods, Most common insect pests of the following plants and their control measures: Paddy, Sugarcane, Groundnut, Coconut and Cotton. Locust and its control. Insect pollinators and scavenger.
UNIT III	Apiculture: Introduction, types of honey bees, hive, apiary, selection of bees for apiary, Newton's beehive, enemies and diseases of honey bees. Sericulture: Introduction, types of silkworms, silkworm races, life history of mulberry silkworm, features of sericulture industry, pests and diseases of silkworm. Lac Culture.
UNIT IV	IPM, physical, mechanical, chemical and biological control methods, Pesticide application equipment.
UNIT V	Introduction and steps towards IPM, Pheromones, antifeedents, repellents and biopesticide.

Course Outcomes(COs)

1. Examine and identify the systemic and functional morphology of various groups of agricultural insect pests.
 2. Differentiate and classify the various groups of insects and estimate the biodiversity.
 3. Explain the pest status in agriculture and control measures.
 4. To compare the methods and outcomes of integrated pest management.
 5. List the economic importance of agricultural insect species.

SEMESTER-VI

Course Code	CourseName	Category	L	T	P	S	Inst .Hours	Marks											
								CIA	External	Total									
23BZO6P1	ANIMAL BIOTECHNOLOGY, MICROBIOLOGY AND IMMUNOLOGY PRACTICAL	Core		-	P	-	2	3	25	75	100								
Learning Objectives																			
CO1	To encourage students to interpret the organization of genomic material and to research theories of genetic inheritance.																		
CO2	To impart the skills required to prepare samples of genetic molecules and to determine their purity, structure and characteristics and to analyze genomic preparations.																		
CO3	To study the changes in genetic material and to predict and consider the consequences of those changes.																		
CO4	To encourage students to report and justify the results of molecular and genetic experiments in an accurate and meaningful manner.																		
UNIT	Details						No.of Hours	Course Objectives											
UNIT I	Isolation of genetic molecules: Isolation of DNA from spleen. Total RNA isolation from plant/animal cells						12	CO1											
UNIT II	Qualitative and quantitative analysis of genetic molecules: Determination of the purity of isolated DNA and RNA samples by UV spectrophotometry. Quantitative estimation of DNA by Spectrophotometry						12	CO2											
UNIT III	Molecular analysis: Agarose gel electrophoresis of DNA. Restriction fragment length polymorphism study. Eliza, Western Blot.						12	CO3											
UNIT IV	Blood Grouping. Total WBC and RBC. Estimation of Haemoglobin. Agglutination test to show Antigen -Antibody reaction. Preparation of Serum components. Radial Immunodiffusion test. Double Immunodiffusion test. Restriction Digestion of plasmid DNA. Ligation of restricted fragments. Hanging drop experiment for observation of live bacteria from given sample.						12	CO4											
UNIT V	Basic animal cell culture technique and transgenesis: Trypsinization of liver cells. Determination of the viability of trypsinized cells by Trypan Blue method. Creation of transgenic flies through virtual lab activity (https://media.hhmi.org/bioInteractive/vlabs/transgenic_fly/index.html)						12	CO5											
	Total						60

Title of the Course		ESSENTIAL REASONING AND QUANTITATIVE APTITUDE							
Paper Number		Professional Competency Skill							
Category	PCS	Year	II	Credits	2	Course Code			
		Semester	IV			23BZO6S1			
Instructional Hours per week		Lecture		Tutorial	Lab Practice	Total			
		1		1	-	2			
Objectives of the Course		<ul style="list-style-type: none"> • Develop Problem solving skills for competitive examinations • Understand the concepts of averages , simple interest , compound interest 							
UNIT-I:		Quantitative Aptitude: Simplifications=averages-Concepts –problem-Problems on numbers-Short cuts- concepts –Problems							
UNIT-II:		Profit and Loss –short cuts-Concepts –Problems –Time and work - Short –uts -Concepts -Problems.							
UNIT-III:		Simple interest –compound interest- Concepts- Problems							
UNIT-IV:		Verbal Reasoning : Analogy- coding and decoding –Directions and distance –Blood Relation							
UNIT-V:		Analytical Reasoning : Data sufficiency Non-Verbal Reasoning : Analogy ,Classification and series							
Skills acquired from this course		Students relating the concepts of compound interest and simple interest							
Recommended Text		1."Quantitative Aptitude" by R.S aggarwal ,S.Chand & Company Ltd 2007
